

CMS (Wordpress)

Pastikan kalian telah mengkonfigurasi IP static / dhcp, web server, dan database

1. Download cms wordpress menggunakan perintah wget

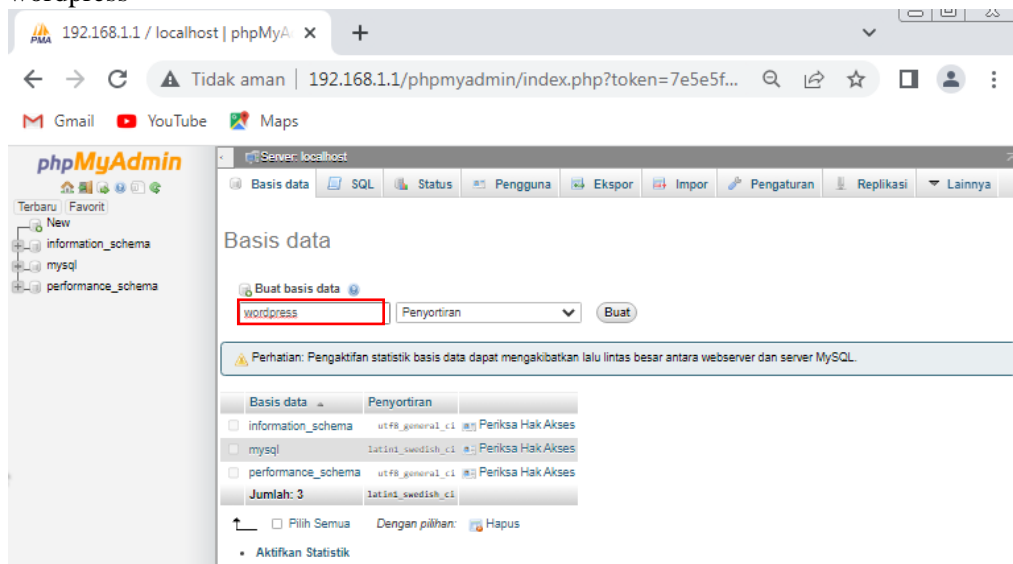

```
root@aril:/var/www/html# wget http://wordpress.org/latest.zip
```
2. Install zip terlebih dahulu agar file wordpress bisa kita buka

```
root@aril:/var/www/html# apt-get install zip
```
3. Unzip file wordpress yang tadi kita download

```
root@aril:/var/www/html# unzip latest.zip
```
4. Beri izin kepada direktori Wordpress tersebut agar bisa diakses oleh client

```
root@aril:/var/www/html# chown -R www-data:www-data wordpress/
```

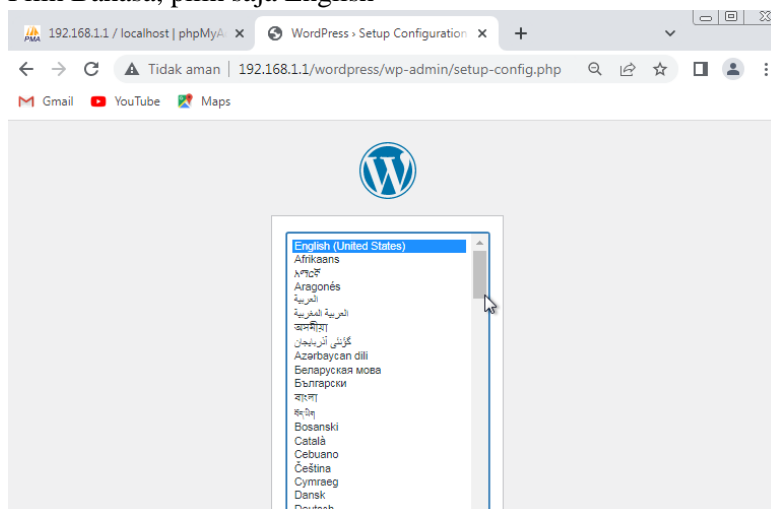

```
root@aril:/var/www/html# chmod -R 755 wordpress/
```
5. Masuk ke client kemudian login di phpMyAdmin lalu buatlah database baru dengan nama wordpress

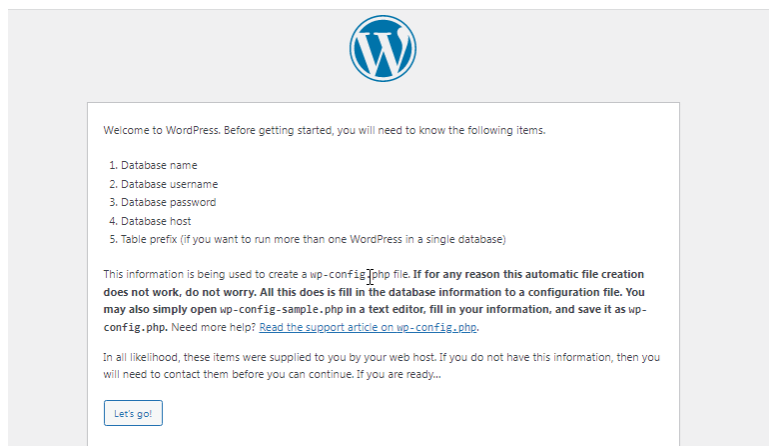

6. Login ke wordpress dengan perintah berikut di web browser client

192.168.1.1/wordpress

7. Pilih Bahasa, pilih saja English

8. Klik lets go

9. Isi saja seperti di bawah ini

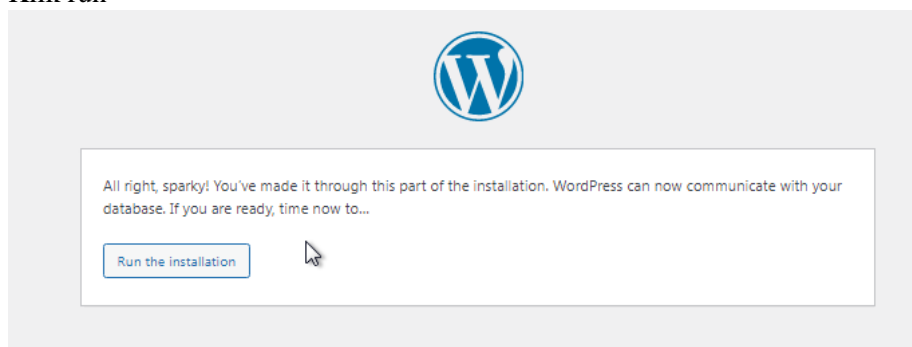

Below you should enter your database connection details. If you are not sure about these, contact your host.

Database Name	<input type="text" value="wordpress"/>	The name of the database you want to use with WordPress.
Username	<input type="text" value="root"/>	Your database username.
Password	<input type="text" value="1"/>	Your database password.
Database Host	<input type="text" value="localhost"/>	You should be able to get this info from your web host. If localhost does not work.
Table Prefix	<input type="text" value="wp_"/>	If you want to run multiple WordPress installations in a single database, change this.

[Submit](#)

- Database name: nama database yang kita buat tadi
- Username dan password : username dan password di phpMyAdmin
- Database host dan table prefix biarkan saja default

10. Klik run

11. Isikan juga seperti di bawah

Search engine visibility
☒ Discourage search engines from indexing this site
 It is up to search engines to honor this request.

[Install WordPress](#)

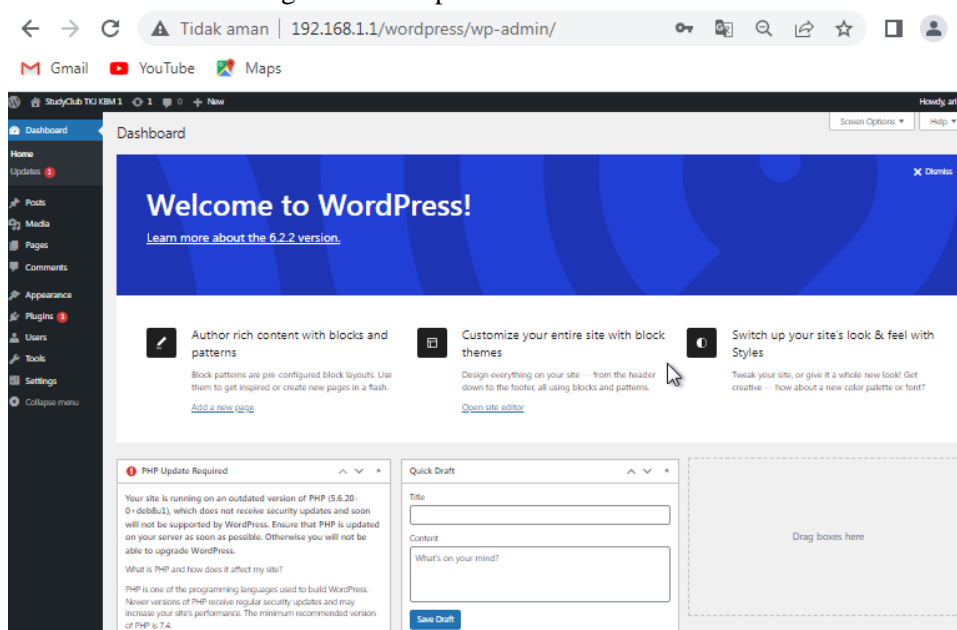

- Site title kalian bebas mau isi apa saja
- Username dan password untuk nanti kita login ke wordpress
- Isikan email masing masing dan ceklis search engine kemudian install

12. Masukkan username dan password yang tadi kita buat

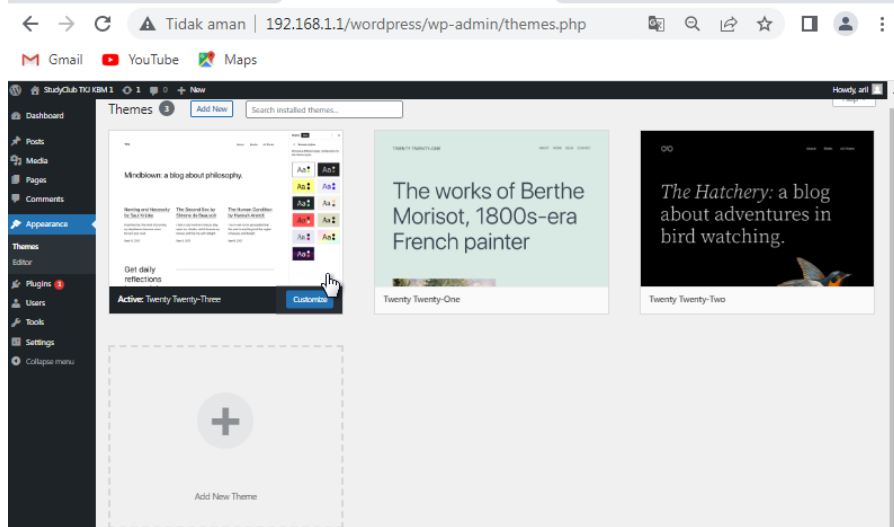

The screenshot shows the WordPress login interface. At the top is the WordPress logo. Below it, a red error message states: "Error: The username root is not registered on this site. If you are unsure of your username, try your email address instead." The login form contains two input fields: "Username or Email Address" with the text "aril" and "Password" with a long string of 12 zeros. There is a "Remember Me" checkbox and a "Log In" button.

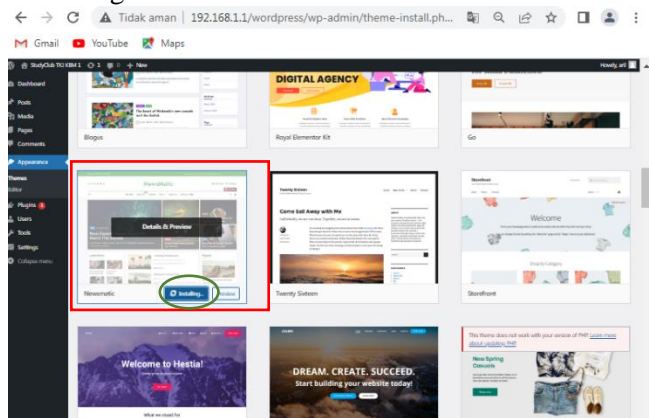

13. Kita telah berhasil menginstall wordpress

14. Kita coba menggunakan tema dengan cara klik appearance > add new theme

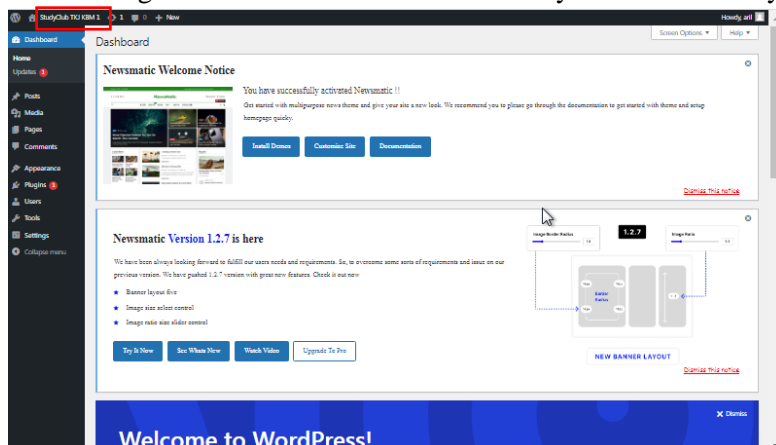

15. Pilih tema yang kalian mau, kemudian klik install yang ada di pojok kanan bawah tema yang kalian inginkan

16. Kemudian klik activate

17. Kembali lagi ke dashboard kemudian klik studyClub TKJ KBM yang ada di pojok kanan atas

18. Kita sudah berhasil menginstall cms wordpress dan memodifikasinya. Kalian bebas mengubah / memodifikasi isinya sesuai keinginan atau kebutuhan kalian.
